#### **DETAILED ACTION**

#### Claim Objections

Claims 1-6 are objected to because of the following informalities: in claim 1, line 3, the word "delimitate" should be changed to "delimit". in claim 3, the term "scheimpflug" should be changed to "Schimpflug". Claims 2, 4-6 inherit the deficiency of claim 1 from which they depend. Appropriate correction is required.

## Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 2-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The language of claim 2 is completely descriptive in nature ("...ensures that the time needed...") and very hard to follow. The examiner is unable to ascertain the meaning of said claim, and a meaningful prior art search could not be performed.

Claim 3 refers to the optical setup configuration being based on the Shimpflug and Hinge conditions without specifically mentioning how the various components of the setup are positioned so that said conditions are satisfied. The phrase "ensuring adequate superposition

Art Unit: 2872

between different optical beams in an imaging configuration" is descriptive in nature and does not disclose the required positional relationship between the various components. Due to the above indefiniteness, a meaningful prior art search could not be performed.

Claims 4-6, recite "an optical setup configuration that implements in practical terms claim 1". The examiner cannot understand what the above means, and specifically the scope of the term "practical". It is not clear what "practicality" has to do with the recording configuration.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 4-5 are rejected under 35 U.S.C. 102(e) as being anticipated by Bloomstein (US 2002/0149751).

Regarding claim 1, Bloomstein discloses a holographic lithographic system (Fig. 2), wherein the two recording beams 115a and 115b are made to interfere within a selected area of the photosensitive material 150, without the use of any physical mask to limit the spatial extent of the recorded area ([0037]). It is noted that members 280a and 280b are shutters or attenuators (not masks), used to block one of the two recording beams for alignment purposes ([0039]). Furthermore, the setup of Fig. 2 ensures that only the area covered by the overlap of the two recording beams is exposed to light.

Art Unit: 2872

Regarding claims 4-5, Bloomstein teaches that a data modulation mask may be placed in the path of one or more of the beams 115a and 115b, yielding a configuration based on one object physical location and two optical channels or based on two object physical locations and two optical channels, respectively ([0044]).

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Hobbs (US 2001/0035991).

Regarding claim 1, Hobbs discloses a holographic lithographic system (Fig. 1a), wherein the two recording beams (lower 28 and upper part 30 of incoming beam 32) are made to interfere within a selected area of the photosensitive material 16, without the use of any physical mask to limit the spatial extent of the recorded area ([0006], [0009]). Furthermore, the setup of Fig. 1a ensures that only the area covered by the overlap of the two recording beams is exposed to light.

Regarding claim 6, because of the folded geometry configuration, the lithographic system of Fig. 1a utilizes only one object physical location and one optical channel (consisting of beam 32).

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dr. Leo Boutsikaris whose telephone number is 571-272-2308. The examiner can normally be reached on M-F, 10-6.

Art Unit: 2872

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephone Allen can be reached on 571-272-2434. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <a href="http://pair-direct.uspto.gov">http://pair-direct.uspto.gov</a>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
